Missing Migrants Project

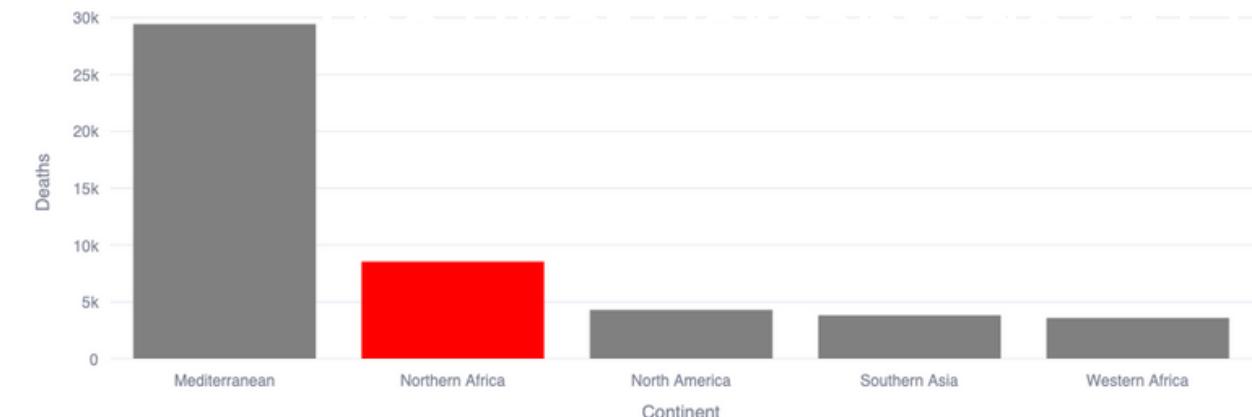

by **Combined Forces**

Northern Africa: significant deaths. multiple routes. poor quality data.

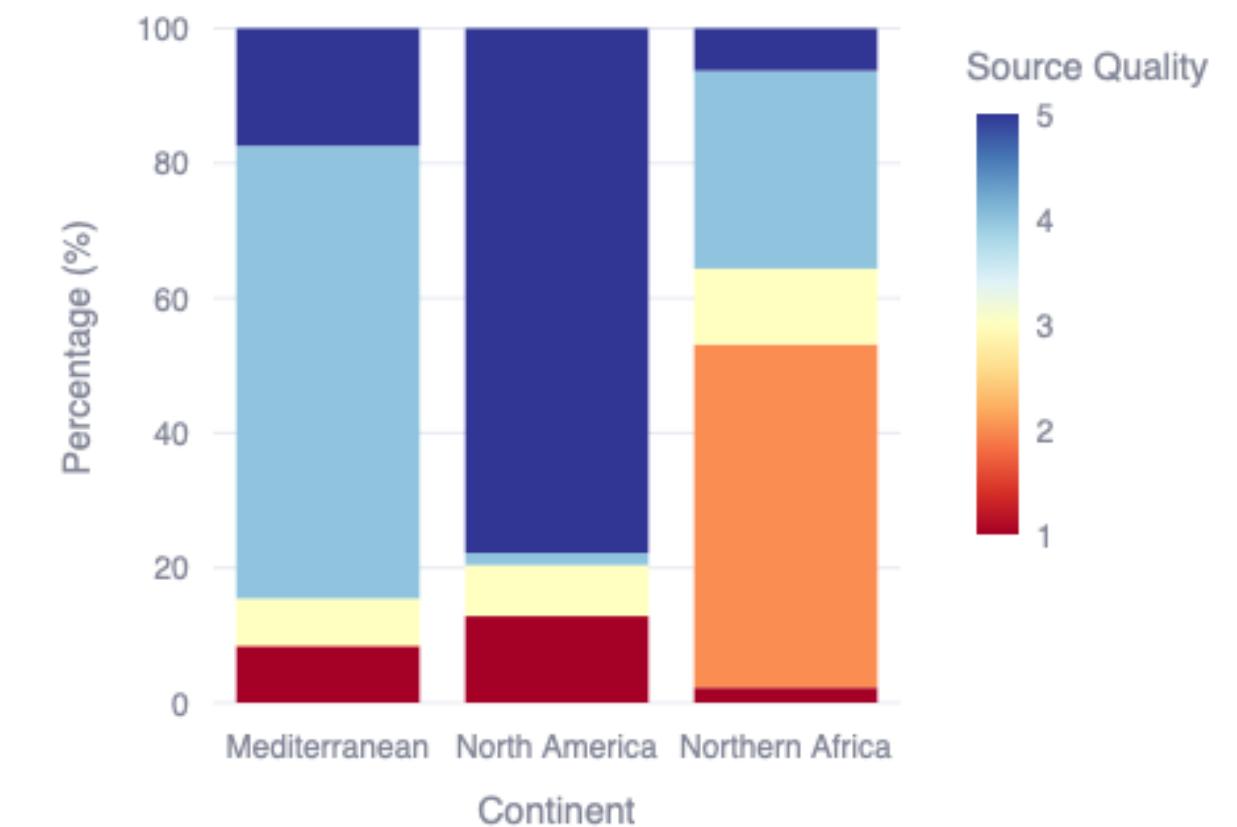

Ranked as the continent with the second-highest number of deaths, Northern Africa faces significant challenges in data quality, compounded by fragmented information from various organizations. With numerous migration routes, many aspects remain unknown, highlighting the urgent need for improved data coordination and collaboration.

main Features

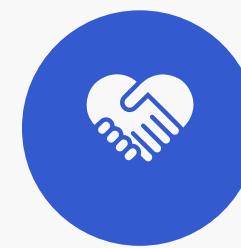

Fingerprint Detective

Utilize advanced AI algorithms to identify potential matches with unparalleled accuracy. By fostering collaboration between agencies, we increase the chances of successful identification, providing practical closure for families and valuable insights for organizations.

Open Access Data System:

Say goodbye to data silos and hello to seamless collaboration. Our platform provides a practical space for research organizations to come together, making data sharing effortless and efficient.

Multi-Agency Collaboration

Connect with esteemed organizations like the South African Department of Home Affairs and the European Border and Coast Guard Agency. Together, we amplify our impact and streamline the data collection process for practical, real-world results.

understand better

Access our interaction dashboard and explore the proposed idea to enhance existing efforts in identifying missing migrants in Northern Africa.
